

# Ni2 Turnkey Charge Capture Optimization Service

Hospital Client Case Studies

## The Problem

Charge capture is so complex it is virtually impossible for hospital teams to identify all possible charge capture opportunities for every patient bill. And even when armed with a “best in class” technology platform, it is rare to find a hospital team with enough bandwidth & specialized charge coding audit expertise to ensure that 100% of billable services are captured on patient bills. **The result – we typically find that 20% - 30% of hospital outpatient bills are missing billable services.**

## The Solution

We provide a turnkey charge capture optimization service to make sure you don't miss any billable services. The foundation is our ChargeView technology platform that features over **500,000 algorithms** with the latest billing regulations to ensure that we identify every possible billed service. We couple that with a team of charge auditor experts who remotely review every flagged virtual bill before it goes out against the medical record to verify that the service was actually provided to the patient. All missed charges are then added to the claim before sending to the payer.

Ni2 Clients	Hospital Net Revenues	% Claims Missing Charges	Ni2 Delivered Net Annual Revenue Lift	% Delivered Net Revenue Lift
Hospital A	\$24,967,023	22.1%	\$1,578,455	6.3%
Hospital B	\$29,930,468	48.8%	\$1,100,947	3.7%
Hospital C	\$97,625,762	15.3%	\$1,522,606	1.6%
Totals	\$152,523,253	30.4%	\$4,202,008	2.8%

## No Bandwidth & No Budget Required

Our data specialists can handle all of the data feeds and system interfaces. And we only get paid as a percentage of documented net benefit to you, so there is no required investment or financial risk.

## Don't Miss Another Billable Service

Ni2 can ensure that you bill & get paid for every individual service you provide. To learn more about determining your missed net revenue lift, please contact:
